

The Radiology Group services at Ormiston Hospital

Industry-leading imaging services for you and your patients

13,000th patient receives TRG services at Ormiston Hospital

TRG Radiology opened at Ormiston Hospital two and a half years ago – we already provide services for 65% of referrers in our area and we've just helped our 13,000th patient.

Our warm and friendly patient service, expert staff, modern facilities and convenient location within the hospital mean we're a good choice for both referrers and patients.

We aim to get the best information for you in the best environment for your patients.

We thought we'd use this opportunity to update you on what we offer.

Industry-leading services from an expert team

Our team of radiology and support staff are here to help. As well as an extensive range of services, our on-site radiologists are available to discuss imaging strategies based on the clinical presentation. We're also available for urgent cases too.

We're also lucky to have specialist breast surgeon **Dr David Moss** on-site to provide screening and diagnostic digital mammography, ultrasound and MRI services. David also helps with comprehensive breast cancer management, including an interventional and biopsy service and advice about high risk patients.

We appreciate how important good patient care is, especially when people may be feeling uncomfortable and nervous. Our friendly and professional staff will help guide your patients through the services they need.

TRG at Ormiston offers you:

- X-ray, mammography, ultrasound and MRI
- Leading radiologists
- Steroid injections for immediate pain relief
- On-site services from breast surgeon Dr David Moss
- Patient Options for Acute Care (POAC), through CMDHB, a free service allowing GPs to access their patients' images as an alternative to an acute hospital admission.

PACS - Coming to a smart phone near you

We are about to release a new internet site with INTELERAD, which will allow you to access PACS on your smart phones, iPads or other applications meaning you'll be able to see reports and key images wherever and whenever you need.

We have a long history of innovation with PACS (Picture Archiving and Communication System) – we were the first radiology group in Auckland to introduce INTELERAD and we believe it is still the world's best system for the digital transmission of images.

Our new website will mean that the high quality images are immediately available to you on your device. You'll be able to access a list of recent patients with thumbnail images, with the option of clicking through to the full image and radiologist's report. This will improve turnaround times, providing convenient access to prior images and facilitating peer-to-peer collaboration for diagnosing more complex medical conditions.

We're also enhancing our PACS system itself. In particular, we're significantly improving the tools for measuring distances and angles across all modalities, as well as the method of accessing historical information and images. We're also including specialist protocols for mammography, with improved hanging protocols for comparing equivalent images on successive visits.

If you are interested in enquiring about our enhanced PACS system and developments please contact **Janine Chant** at TRG Ormiston on **09 253 9473** to discuss your needs.

TRG at Ormiston offers your patients:

- **FREE** ACC x-ray and ultrasound
- **FREE** pregnancy scans for most women, including dating, nuchal and anatomy ultrasound
- Patient friendly and geographically accessible location supporting a growing community
 - Modern facilities
 - Plenty of parking
 - An on-site café
